

Ideal Client & Lead Targeting Brief — Queensland

A clean summary of NorthPath's ideal-client research and location targeting data, prepared for the marketing team to plan and target lead-generation campaigns. This document contains targeting research only — it does not review or comment on any past or current marketing activity.

Prepared: July 2026 Focus market: Queensland Product: owner-occupier home purchase pathway

1. The Ideal Client at a Glance

Every campaign, audience and lead form should be built around this profile. A lead who matches all four headline criteria is exactly who we want to reach.

SUPERANNUATION

\$150,000 minimum

Combined superannuation balance across the household.

HOUSEHOLD INCOME

\$150,000+ combined

Own income plus partner income. Comfortably above this is even better.

TARGET PURCHASE

\$700k–\$800k max

Established property, bought to live in (owner-occupier).
Not new builds, not investment.

CREDIT HISTORY

Good / clean credit

No bankruptcies, Part IX agreements or significant unpaid defaults.

Supporting profile signals

Beyond the headline criteria, our lead research shows the strongest prospects also look like this:

SIGNAL	WHAT "IDEAL" LOOKS LIKE
Age band	Roughly 30–55 years old.
Employment	PAYG full-time, or self-employed with 2+ years of trading history. Part-time, casual and contract income can still qualify but ranks lower.
Unsecured debt	Total monthly repayments on cards, car loans, personal loans and buy-now-pay-later under about \$1,000/month.
Buying timeframe	Planning to buy within the next 2 years. Inside 12 months is the sweet spot; 0–6 months is hottest.

Location	Lives in (or is targeting) a suburb where established houses commonly sell within the \$700k–\$800k ceiling — see Section 2.
----------	--

Who we do not want campaigns to attract: bankruptcy or Part IX history, significant unpaid defaults, currently unemployed, buyers targeting property well above \$800k, and pure investors (this product is for people buying an established home to live in).

2. Queensland Location Targeting — Postcodes

Location targeting is anchored to suburb affordability: we want audiences in areas where established houses commonly transact at or below the client's \$700k–\$800k ceiling. Postcode is the most reliable targeting signal — use it as the primary geo layer in ad platforms.

Tier 1 — Core targets (medians at or under ~\$700k)

SUBURB / AREA	POSTCODE	INDICATIVE MEDIAN (HOUSE)	PRIORITY
Rockhampton	4700	\$430,000	Core
Bundaberg	4670	\$480,000	Core
Townsville	4810	\$520,000	Core
Cairns	4870	\$560,000	Core
Logan Central	4114	\$610,000	Core
Toowoomba	4350	\$620,000	Core
Redbank Plains	4301	\$620,000	Core
Ipswich	4305	\$640,000	Core
Beenleigh	4207	\$650,000	Core
Caboolture	4510	\$660,000	Core
Morayfield	4506	\$670,000	Core
Deception Bay	4508	\$690,000	Core

Tier 2 — Stretch targets (medians \$700k–\$800k)

Inside the client's ceiling but with less buffer — include in targeting, expect slightly lower match rates.

SUBURB / AREA	POSTCODE	INDICATIVE MEDIAN (HOUSE)	PRIORITY
Springfield Lakes	4300	\$760,000	Stretch
Strathpine	4500	\$780,000	Stretch

Outside the ceiling — exclude or deprioritise

SUBURB / AREA	POSTCODE	INDICATIVE MEDIAN (HOUSE)	PRIORITY
North Lakes	4509	\$850,000	Deprioritise
Paddington (Brisbane inner)	4064	\$1,650,000	Exclude

Important — how to use these medians: figures are indicative estimates used purely to prioritise targeting. They are not valuations and must never appear in ads, landing pages or customer conversations as price promises. Leads from postcodes not on this list are not automatically rejected — they default to medium priority and are assessed individually.

3. How Leads Are Graded Once They Arrive

Every lead that comes in is scored out of 100 against the ideal client profile and graded A+ to D. Understanding the weighting helps you design lead forms and audiences that produce A-grade leads — the factors below are, in order, what makes a lead valuable to us.

SCORING FACTOR	WEIGHT	GRADE	SCORE BAND
Household income	25	A+	85–100 — priority contact
Employment stability	20	A	70–84 — strong prospect
Debt profile (unsecured repayments)	15	B	55–69 — nurture
Credit profile	15	C	40–54 — long-term nurture
Buying timeframe	15	D	Below 40 — outside profile
Location / affordability	10		

Lead form fields that matter

The scoring engine needs these data points — the more of them a campaign captures, the more accurately we can prioritise the lead. Recommended fields for lead forms and landing pages:

- Own annual income and partner annual income (or a combined household income band)
- Employment type (PAYG full-time / part-time / casual, self-employed & years trading, contractor)
- Approximate total monthly repayments on unsecured debt (cards, car/personal loans, BNPL)
- Credit history self-assessment (clean / minor past issues / significant issues)
- Buying timeframe (0–3, 3–6, 6–12 months, 1–2 years, 2+ years)
- Suburb and postcode (postcode is the key targeting and scoring field)
- Superannuation balance band (e.g. under \$100k / \$100–150k / \$150k+)

4. Messaging Guardrails (Compliance)

All customer-facing marketing must follow these rules — they are non-negotiable:

- **Never promise approvals, finance or outcomes.** Banned phrasing includes "guaranteed approval", "you will be approved / will qualify", "instant / automatic / assured approval", "pre-approved for sure", "no risk" and "100% approval/success".
- **Educate first, sell second.** Content positions NorthPath as an education-and-preparation guide working alongside licensed professionals — NorthPath is not a lender.
- **Medians and affordability data are for targeting only** — never quoted as valuations or price promises.
- **Append the standard disclaimer** to customer-facing content: *"This information is general and educational only. It does not consider your personal circumstances and is not financial or credit advice. Outcomes depend on individual circumstances — consider seeking advice from a licensed professional."*
